

PGS 3D Replay

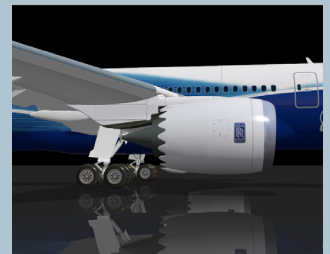

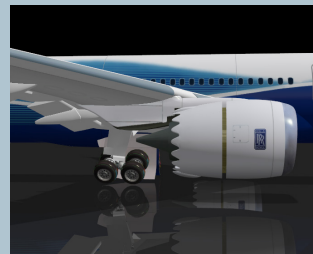

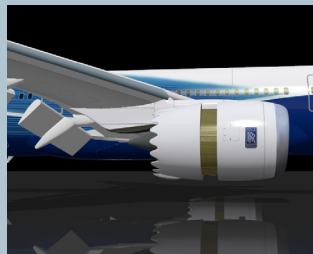

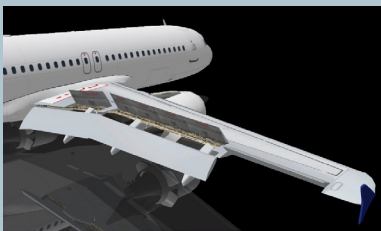

Terrain Maps & Elevations

PGS 3D REPLAY allows operators to visualize events in a dynamic manner.

Visual and true-to-real replay offers many benefits for the operator, including:

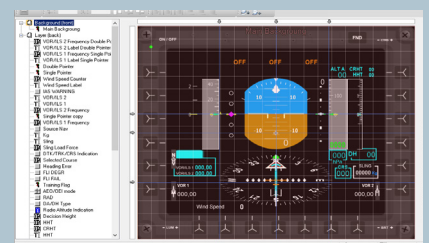

- A better understanding and contextualization of actual events, incidents, accidents.
- A universal format to spread awareness on incidents, best practices, operations optimization, inefficiencies, technical and non-technical errors across the organization.
- A training tool for crew and technical staff.

Highly Detailed 3D Models

All moving parts are animated according to the value of the flight parameters. Customer-specific liveries on request.

Create Flight Instruments & Cockpit Panels

High Resolution 3D Terrain

PGS 3D Visualizations can display local or on-line maps with a resolution of up to 1 meter.
